

Scratch Hog – Wet 2011-2012

Quality Glass Scratch Repair Tools

gtglass.com

Easy to Operate, Fast and Profitable

The Scratch Hog™ – Wet system is designed to perform professional glass restoration in a timely manner, which will produce satisfied customers and higher profits. This system continues to be the number one choice for isolated glass scratch damage ranging from heavy intentional damage to light incidental damage.

The Wet Scratch Hog Works Fast and is Easy to Operate!

The speed and efficiency of the Scratch Hog – Wet system is unparalleled and enables you to quickly and safely get to the bottom of the scratch and then polish the glass back to like-new condition with restored clarity and strength.

Delivers Professional Results Time After Time

The Scratch Hog™ – Wet system consistently delivers professional results time after time without expensive compounds and slurries that slow down the restoration process. We take glass restoration to a whole new level by combining innovative technology with the finest components and the best support in the industry.

High Demand Means Profits For You!

The Scratch Hog – Wet system's ease of operation, speed and performance result in the most profitable glass restoration solution in the industry. With standard glass scratch removal rates in the industry being \$100.00 to \$125.00 per hour, you can see the benefits of getting into this rapidly emerging industry. The Scratch Hog – Wet is great either as an addition to your existing business or as a stand-alone business operation. Either way, this restoration system gives you a substantial competitive advantage in your marketplace. The market for the Scratch Hog – Wet includes such applications as: glass damaged during new construction, storefront graffiti damage, water-stained glass, scratched glass furniture, scratched automotive glass, imperfect manufactured glass products and many other applications. The Scratch Hog – Wet is designed to remove scratches from all types of glass, including: automotive glass, mirrors, tempered glass, as well as commercial and residential glass. All this available business translates into profits for you.

Advanced Design and Superior Results

Common sense dictates that if you want to remove a scratch, then you must remove some of the glass to get to the bottom of the damage. There is no other way to effectively remove scratches and restore glass to its original clarity. While other systems try to sell you on illogical approaches, Glass Technology combines innovative technology and real science to produce superior results.

The Scratch Hog – Wet system safely goes four times deeper than other methods and removes mild to severe scratches in a fraction of the time of other products. This will allow you to take on scratch repair jobs that your competitors reluctantly have to turn down; time is profitability.

Removes Mild to Severe Scratches in a Fraction of the Time

The Scratch Hog – Wet uses a series of advanced glass cutting discs created by a patented micro-replication process. This breakthrough technology forms the discs by applying microscopic 3-D structures in a uniform pyramid pattern to a special backing material. Each disc is graded by micron size and color-coded to help you select the proper disc depending on the severity of the scratch.

Tested with Distortion Free Results

Glass Technology's Scratch Hog – Wet was independently tested under American Society for Testing and Materials (ASTM) standards to analyze the distortion factor that was created with the system. Thirty pieces of 1/4" tempered Old Castle glass were scratched for evaluation. These samples were then repaired with the Scratch Hog – Wet system.

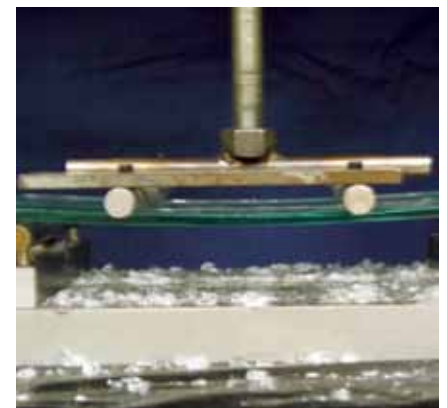

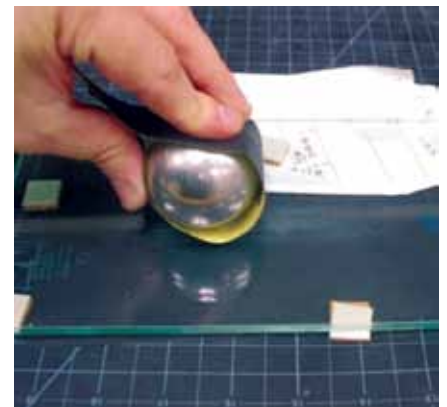

Scratching was produced using a 1 lb. steel ball that was secured to 320 grit carbide abrasive paper. Ten strokes were applied to the sample glass pieces using the steel ball and abrasive paper to produce the necessary damaged sample pieces. To our knowledge, no heavier abrasive material has ever been used for testing glass restoration to ASTM standards.

Tested Distortion Free!

"Upon repair of the scratched areas by Glass Technology, the sample condition was returned to that of the initial evaluation with no defects observed under these ASTM strict guidelines" (Arch Testing).

Repair and Protect

Many cities across the country are experiencing graffiti in the form of glass etching, scratching and paint from vandals. With the Scratch Hog – Wet, not only can one remove graffiti and restore glass to its original finish, the glass can also be protected and its life prolonged for most architectural glass surfaces with the application of graffiti window film. Expand your Glass Scratch Restoration business by adding Glass Technology's Diamond Clear Glass Graffiti Film. Easy, profitable and effective, this is a perfect product and service for any glass restoration professional using the Scratch Hog – Wet.

Free Factory and Satellite Training

Glass Technology's commitment to your success goes beyond selling you the best equipment in the industry. When you purchase a Glass Technology system, you receive free hands-on factory training with your new system at our facility in Durango, Colorado.
